

THE FUTURE OF ALZHEIMER'S CARE: BIOMARKERS AND BREAKTHROUGH THERAPIES

Special Webinar Presentation

**October 30, 2025 | 11:00 am PDT
ONLINE VIA ZOOM**

Alzheimer's research is advancing faster than ever, with new tools that may help detect the disease earlier and guide more personalized treatments. This engaging class explores the role of blood-based biomarkers in identifying Alzheimer's risk and progression, along with the latest FDA-approved and emerging therapies that can slow or manage the disease. Participants will gain a clear understanding of what biomarkers are, how they are changing the landscape of diagnosis, and what treatment options are currently available.

Presented by:

Marianne Chapleau, PhD
Medical Science Liaison
